Problem Statement: The project aims to develop a comprehensive expense calculation system using ServiceNow. This system will enable users to track and manage family expenses efficiently. It will include features such as expense categorization, budget setting, real-time tracking, and reporting capabilities. Utilizing ServiceNow's robust platform, the project will ensure seamless integration, user-friendly interface, and scalability to accommodate varying family sizes and financial complexities. The end goal is to empower users with the tools they need to make informed financial decisions and promote financial well-being within the family unit.

Objective: The "family expensive project" phrase seems to be a misunderstanding, but if referring to ServiceNow's Strategic Portfolio Management (SPM), also known as Project Portfolio Management (PPM), its objective is to strategically manage and optimize a portfolio of projects by aligning them with business goals, providing real-time visibility into performance, and improving agility and resource allocation to deliver maximum customer value.

5. In Advance (we write the code): Write the below code >>

```
(function execute Rule (current, previous /*null when async*/) {
```

```
var Family Expenses = new Glide Record (' u_family_expenses ');
Family Expense. Add Query('u_ date',current.u _ date);
Family Expenses. query();
If (Family Expenses. next())
{
Family Expenses .u _amount += current .u_ expense;
```

```

FamilyExpenses.u_expense_details += ">" + current.u_comments + ":" + "Rs." + current.u_expense + "/-";
";
FamilyExpenses.update();
}
else
{
var NewFamilyExpenses = new GlideRecord('u_family_expenses');
NewFamilyExpenses.u_date = current.u_date;
NewFamilyExpenses.u_amount = current.u_expense;
NewFamilyExpenses.u_expense_details +=
">" + current.u_comments + ":" + "Rs." + current.u_expense + "/-";
NewFamilyExpenses.insert();
}

})(current, previous);

```

```

Script
1 (function executeRule(current, previous /*null when async*/) {
2
3     var FamilyExpenses = new GlideRecord('u_family_expenses');
4     FamilyExpenses.addQuery('u_date', current.u_date);
5     FamilyExpenses.query();
6     if(FamilyExpenses.next())

Conclusion: A successful ServiceNow "family" (project or platform) implementation, even a costly one, is concluded by demonstrating tangible business value through strategic alignment, improved operational efficiency, and positive user satisfaction. Achieving these outcomes requires senior expertise, comprehensive process mapping, a strong focus on configuration over customization, and ongoing transparent communication to manage risks, ensuring the project delivers its intended benefits and a positive return on investment.
